02

We are committed to creating distinctive and eye-catching nighttime landscape effects, offering a one-stop solution to meet various lighting needs.

03

Our services include lighting planning, luminaire design, custom luminaire manufacturing, global transportation, and worldwide installation.

OUR SERVICES

01 Full Artistic Lighting Solution

Our project team can provide the overall lighting art scheme for your project according to your requirements and budget, which can cover any space and any corner of your project, so that you can save time and effort

02 Custom Lighting

Not every lighting factory can do original design, and Anno lighting design team has rich experience to do 100% original lighting design for your project

03 Intelligent lighting

Our professional lighting design team can make a complete lighting design and production scheme according to any design reference of customers, even if it is just a hand-drawn draft or a picture

04 Certificate

In addition to the existing lighting plan, we can make your project more intelligent

05 Budget Control

No matter what the client's project budget is, our professional product and industry knowledge will always allow us to make a reasonable lighting design and solution.

06 Project Management

Extensive project management experience and a detailed project management process allows us to deliver all projects on time and on target, including some very challenging projects.

07 Quality Control

We strictly control the quality control work of each link from lighting design, production plan formulation, in-depth drawing production, raw material procurement, to each link of production.

08 Global Transport

By working with major freight forwarders, we can deliver your sculpture by sea, air, road and courier to any city in the world.

09 Global Installation

Every light comes with a comprehensive installation manual and our installation team can also provide on-site installation services wherever your project is located in the world.

PROJECT MANAGEMENT

Time Management

Many projects we undertake have strict time requirements, such as Qatar Hotel, the normal construction period is 3 months, but due to the requirements of the hotel, it must be completed within 2 months. Therefore, we did a lot of work in the allocation and coordination of human and material resources, and finally completed the project on time with quality and quantity guaranteed

Quality Control

A lighting project of high quality is not a link to do well can be achieved. The quality of a piece of lighting is determined by factors such as in-depth design, process selection, material variety, material amount, technical level of workers in the production process and working time. Therefore, in order to achieve high quality, Anno will control these aspects at the same time.

Risk Management

In order to ensure the success of the project, we will have a risk management team for each lighting project, mainly to eliminate potential impact on production safety and may cause delays. For example, whether the daily electricity is in line with safety specifications, whether the product packaging is standardized, each product will be equipped with 3% more accessories, booking space in advance, etc. The ability to control various risks is an important part of our strong project management capability

CUSTOM MADE SERVICE

Lighting customization is a service we have been doing for the past 12 years, and it is what we are best at. Whether it is design, size, material or color, it can be adjusted according to customer's requirements.

LIGHTING DESIGN

Lighting design is a crucial element in shaping the ambiance, functionality, and aesthetics of any space. It goes beyond simply providing illumination, encompassing a creative blend of art and science to create captivating environments. From residential interiors to commercial establishments, lighting design has the power to enhance moods, highlight architectural features, and elevate the overall experience.

GLOBAL TRANSPORT FITTING OUT

R E S H A P I N G S P A C E W I T H L I G H T

Sea freight is our most important mode of transport for deliver our lighting worldwide, with different sea freight times for different regions, as follows

SEA FREIGHT

For smaller quantities of small and medium sized lights, air freight is also one of our more common modes of transport, with fast times and high transport costs, with a global transit time of 5-10 days.

AIR FREIGHT

For projects in Central Asian countries and Russia, we often use rail and road transport, with a transit time of about 15-20 days.

A large, circular, metallic frame is positioned on a grassy lawn in a park. Inside the frame, a group of people, including children and adults, are gathered. The frame appears to be a large, circular mirror or a light installation that reflects the surrounding environment. The background is filled with lush green trees and foliage. The overall scene is bright and sunny, suggesting a pleasant day in the park.
